SYMPRAXIS CONSULTING

This talk changed while I was making it

Six months ago: “AI features in SharePoint”

Today: SharePoint is becoming an AI application platform

Copilot in SharePoint reached GA September 30
The feature set spans chat, skills, content creation, automation, images, reports, and apps
The right question is: “What earns stage time?”

SYMPRAXIS CONSULTING

The 60-minute version

Ask

Grounded answers from SharePoint content

Teach

Skills and site instructions

Create

Files, pages, sites, images

Automate

Metadata and business process

Build

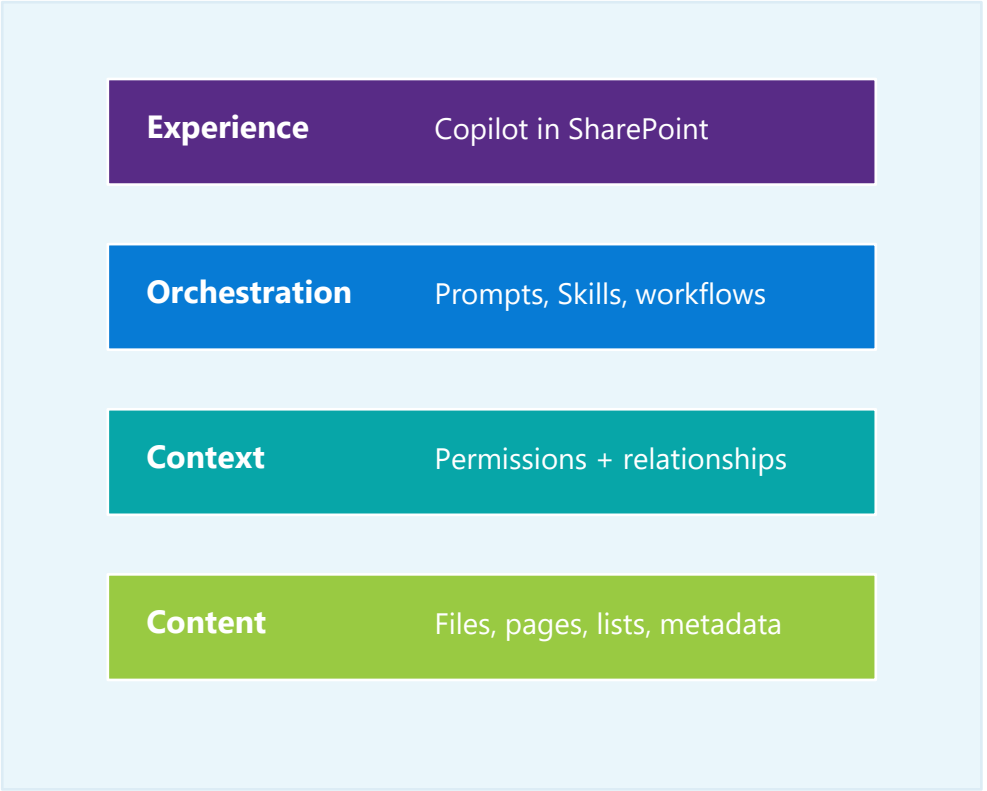

Live HTML apps and dashboards

Not every feature gets a demo. The goal is a mental model you can reuse Monday morning.

SYMPRAXIS CONSULTING

Foundation: SharePoint is the grounding layer

Content gives Copilot something to reason over
Permissions remain the security boundary
Structure and metadata improve the answers
Bad content still produces bad results — now faster

Good AI starts with good information architecture.

SYMPRAXIS CONSULTING

Ask SharePoint

Grounded answers from SharePoint content

01

SYMPRAXIS CONSULTING

Ask: chat with the site, library, list, or file

The basic interaction model still matters.

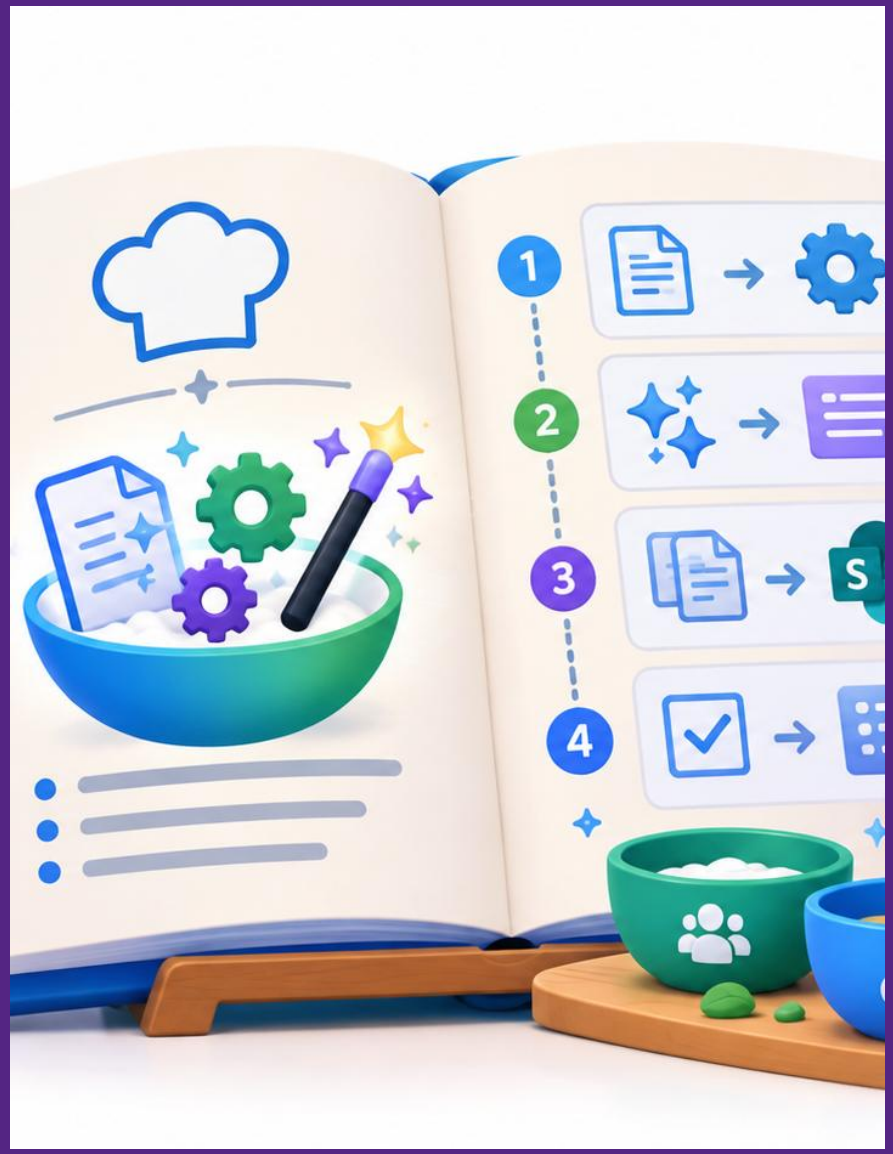

Ask questions across SharePoint content
Compare documents and summarize pages
Use citations to verify answers
Add context with files, images, pages, or lists

SYMPRAXIS CONSULTING

Teach SharePoint

Skills turn repeatable expertise into reusable AI behavior

SKILL.md is the durable idea

A Skill is not just a prompt. It is packaged task knowledge.

```
# Skill name

When to use this skill
Inputs you need
Steps to follow
Rules and guardrails
Expected output
```

Markdown keeps it editable and reviewable
Site Skills live with the team/site
Personal Skills can follow a user across work
Evaluations turn “seems good” into “we tested it”

SYMPRAXIS CONSULTING

Site Skills, Personal Skills, and portability

Site Skills

Team process
Shared site behavior
Stored with site assets

Personal Skills

Individual workflow
Works across sites
Stored in OneDrive

Portability

Industry standard
Downloadable
Reusable across sites

Copilot Cowork and Copilot Studio agents support skills too.

SYMPRAXIS CONSULTING

SharePoint.md: site instructions for AI

Skills teach tasks. SharePoint.md teaches the site.

Describe the site purpose and audience
Clarify important libraries, lists, and terminology
Set expectations for generated content
Help AI understand local context before users ask

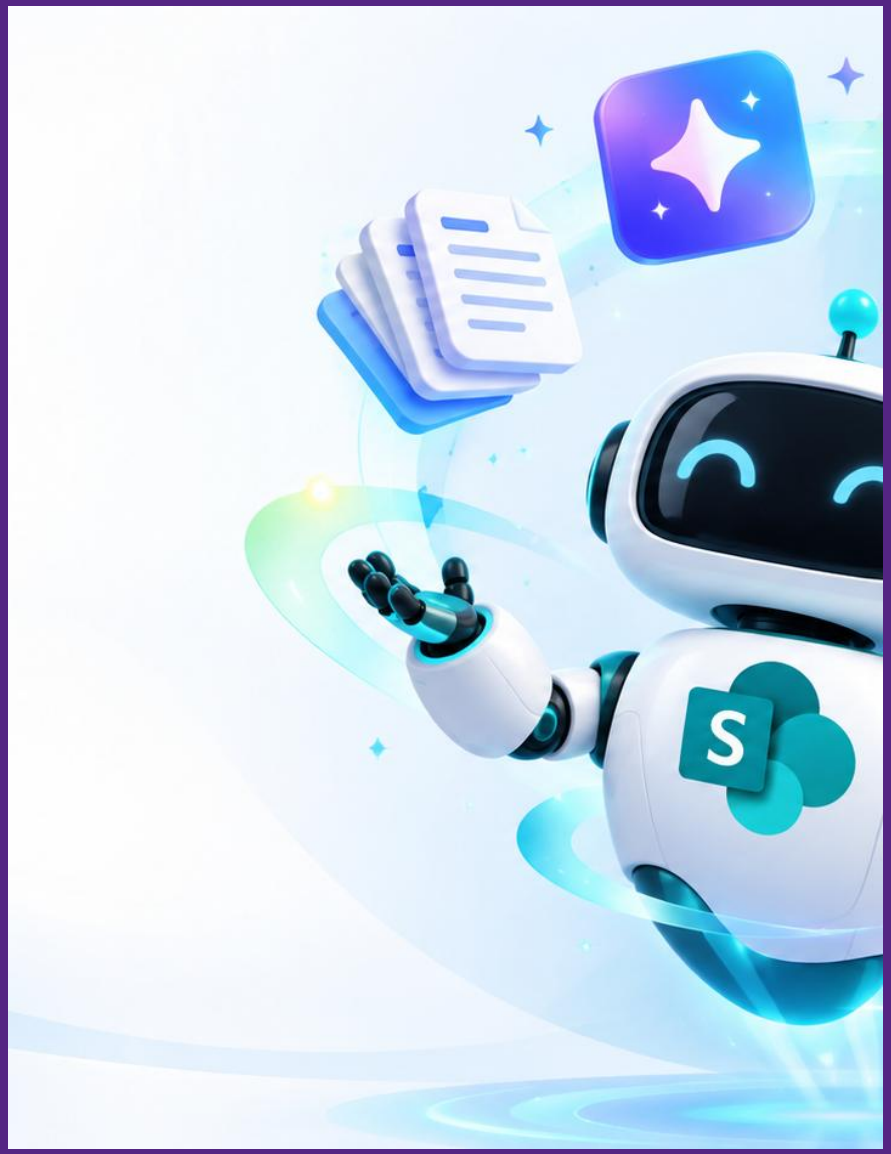

SharePoint.md

```
# Site purpose
# Key content
# Important terms
# Do / Don’t
# Output preferences
```

SYMPRAXIS CONSULTING

Create with SharePoint AI

Files, pages, sites, images — and fewer blank canvases

SYMPRAXIS CONSULTING

Create: content, pages, sites, and images

Generate Word, Excel, and PowerPoint files from SharePoint content
Create pages and sites with natural language
Generate and edit images directly in the SharePoint flow
Use existing site content as the grounding material

"Make me a hero image for this project page using the tone of the site."

SYMPRAXIS CONSULTING

Automate the boring parts

Metadata, approvals, rules, quick steps, workflows

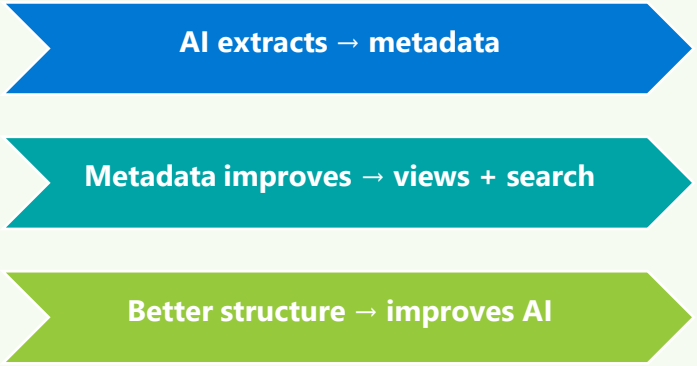

SYMPRAXIS CONSULTING

Automate: better SharePoint for people and AI

Autofill columns extracts structure from unstructured files
Rules and notifications turn language into action
Quick Steps package common list work
Approvals and workflows become easier to author

The flywheel

This is where “better IA” stops being homework and starts being an AI accelerator.

SYMPRAXIS CONSULTING

Build lightweight apps

Live HTML dashboards from SharePoint data are the money shot

Build: live HTML dashboards and reports

The punchline: data becomes an app.

Start with one or more SharePoint Lists
Generate a dashboard, report, tracker, or lightweight app
Keep it connected to live SharePoint data
Use /_html guidance for SharePoint-safe output

Old joke, new punchline: “Should this be a list, a Power App, Power BI, SPFx… or just ask Copilot?”

SYMPRAXIS CONSULTING

Reality check: licensing, credits, and governance

Not all capabilities are licensed the same way
Advanced/large-scale features may consume Copilot Credits
Skills need ownership, review, and lifecycle management
Generated content still needs human judgment
Permissions, labels, DLP, and sharing still matter

Monday morning checklist

✓ Pick one site
✓ Clean up content
✓ Add metadata
✓ Write one SKILL.md
✓ Test it with real users

SYMPRAXIS CONSULTING

What I did not have time to show

Audio summaries
Site analytics
Advanced autofill scenarios
Copilot UX components in SPFx

Cowork using SharePoint context
Copilot Studio connections
GitHub Copilot + /_html
People Skills / expertise graph

The ecosystem matters: SharePoint AI is increasingly a substrate for Copilot, agents, and custom experiences.
